

UWA FUTURE FARM 2050 – THE PROJECT

PROF. GRAEME B MARTIN

University of Western Australia (UWA)

UWA Institute of Agriculture

Facultad de Veterinaria. Salón de Grados
30 de enero de 2014 - 12:00 h.

This presentation introduces the UWA Future Farm 2050 Project. The mission is to develop innovative farming practices so the world can feed 50% more people by the year 2050 without destroying the planet. The Future Farm thus promotes environmental management and biodiversity conservation, whilst maintaining a primary focus on enterprise profitability, remembering that agriculture is the world's biggest industry and that food is a major part of the economy of most countries.
